

AFFAN ZAHID

Software Engineer • Full Stack Developer (MERN • Next.js • React Native)

Lahore, Pakistan | +92-331-4906039 | zahidaffan72@gmail.com | LinkedIn | Portfolio | GitHub

PROFESSIONAL SUMMARY

Results-driven Software Engineer with 3+ years of experience building scalable, production-ready web and mobile applications for international clients. Strong background in clean architecture, SaaS platforms, real-time systems, and end-to-end delivery. Skilled in direct client communication, gathering requirements, presenting demos, and delivering progress updates across time zones. Leverage AI-powered development tools (Claude Code, Cursor) with effective prompt engineering to accelerate development and ship high-quality features faster.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, C++, SQL

Frontend: React.js, React Native, Next.js, Tailwind CSS, HTML/CSS

Backend: Node.js, NestJS, Express.js

Databases: MongoDB, PostgreSQL, Firebase, Supabase

Cloud & DevOps: AWS, Firebase (FCM, Auth, Firestore), Docker, Git/GitHub, CI/CD

AI-Powered Development: Claude Code, Cursor, Prompt Engineering, RAG Pipelines, Vector Databases, LLM API Integration

Tools & Professional: Jira, Trello, ClickUp, Postman, Socket.io, Client Communication, Agile/Scrum, Remote Teamwork

PROFESSIONAL EXPERIENCE

Software Engineer | Techtimize • Full-time • On-site

Oct 2025 – Present

- Develop and maintain full-stack web applications using React.js, Next.js, and Node.js for production-level business clients, including microservices-based backends with NestJS and PostgreSQL deployed on AWS.
- Build responsive, component-driven interfaces with RESTful APIs, authentication, admin panels, role-based access control, and payment gateway integrations including Stripe.
- Accelerate development velocity using AI-assisted tools such as Claude Code and Cursor, applying structured prompt engineering to deliver features faster while maintaining code quality.
- Communicate directly with clients to gather requirements, present demos, and provide progress updates, translating business needs into reliable technical solutions.

Key Project: iShout.ae — Influencer Marketing & Brand Collaboration Platform (Next.js + Python)

- Led development of an influencer marketing platform enabling businesses to discover, manage, and collaborate with content creators through a streamlined digital ecosystem.
- Designed scalable REST APIs, campaign management workflows, creator onboarding, analytics dashboards, and role-based access controls, and optimized performance through SSR, caching, database tuning, and CI/CD pipelines across Dev, Staging, and Production.

Key Project: Tawabiq.sa — Real Estate Platform (Next.js + Python)

- Broker Portal: built a comprehensive broker management system covering properties, leads, customer communications, appointments, commission tracking, and transaction workflows with advanced search, geolocation, and role-based permissions.
- User Portal: built a modern real estate marketplace with authentication, saved searches, favorites, recommendations, and map-based search, improving SEO, Core Web Vitals, and organic traffic through SSR and backend optimization.
- Admin Portal: developed an enterprise-grade administration system for users, brokers, listings, approvals, and content moderation with reporting dashboards, audit logs, workflow automation, and secure deployment workflows.

Key Project: Entry Club — Multi-Tenant Web & Mobile Platform (Next.js, NestJS, Mobile Apps)

- Architected a multi-tenant web and mobile platform using Next.js with loosely coupled modules and a microservice-ready design, enabling seamless future migration to NestJS microservices.
- Integrated Meta APIs, Google APIs, OAuth, push notifications, analytics, and payment gateways, and built high-performance backend services and reusable component libraries supporting thousands of concurrent users.
- Established complete CI/CD workflows across Dev, Staging, and Production, and delivered role-based access control, real-time notifications, reporting dashboards, and event management across web and mobile.

MERN Stack Developer | 360HR • Remote • Part-time

Aug 2023 – Jan 2026

- Led end-to-end development of an enterprise job portal and applicant tracking system (ATS) using the MERN stack, building high-performance React.js interfaces for job posting, candidate search, applicant pipelines, and recruiter analytics.

- Designed RESTful APIs with Node.js and Express.js for job workflows, applications, and notifications, secured with JWT-based role-based access for admins, recruiters, and applicants.
- Optimized MongoDB schemas, aggregation pipelines, and indexing strategies for fast search and filtering across large candidate datasets, and integrated email notifications, resume uploads, and reporting tools.
- Communicated directly with international clients and stakeholders, leading requirement discussions, sprint demos, and status updates while delivering features in agile sprints and maintaining the platform in production.

Software Engineer | Euphoria XR · Full-time · On-site

Jun 2024 – Oct 2025

- Developed and maintained a production React Native social app with location-based discovery, real-time chat, friend management, user profiles, and event workflows.
- Built a scalable real-time chat module using Socket.io with reliable message delivery, presence tracking, and low-latency communication, and integrated RESTful APIs for app features, user data, and events.

Key Project: Vumi — Mobile Application (React Native)

- Developed a cross-platform React Native app delivering a native-like experience on iOS and Android, with authentication, dynamic content feeds, user profiles, and push notifications using Firebase (FCM, Auth).
- Integrated RESTful APIs for real-time data sync and media handling, and optimized performance with efficient list rendering, lazy loading, and state management.

Key Project: AI Calling Bot — Voice Automation with RAG (Python)

- Built an AI-powered calling bot in Python handling automated voice conversations using speech-to-text and text-to-speech pipelines.
- Implemented a Retrieval-Augmented Generation (RAG) pipeline with a vector database and embedding-based semantic search to retrieve relevant context in real time during live calls.
- Integrated LLM APIs with conversation state management, call flow logic, and fallback handling, applying prompt engineering to optimize response accuracy and reliability in production.

Key Project: French Riviera Travel — Travel & Destination Platform

- Worked on a travel content platform featuring destination guides, attractions, blogs, and accommodation content, building responsive pages and improved navigation for a production-ready travel discovery experience.

PART-TIME REMOTE PROJECTS

Instant Custom Boxes — E-commerce / Custom Packaging Platform

- Developed responsive website sections including product categories, quote request flows, and landing pages, improving the browsing, customization, and inquiry-based ordering experience.

Bitrix24-Based CRM — CRM / Workflow Management Platform

- Contributed to CRM modules including task management, collaboration tools, user roles, reporting, and workflow automation, with scalable admin and business management interfaces.

T-Mobile — Real-Time Collaboration Tool

- Contributed to a real-time collaborative task management application with live synchronization, multi-user support, and role-based access control using React.js and Node.js.

EDUCATION

Bachelor of Science in Computer Science

Sep 2020 – Jul 2024

University of Lahore, Lahore, Pakistan
